

## EVault SaaS

### **DISK-O-TAPE, INC.**

#### **Key Benefits**

- Easy, automatic data protection
- Secure and reliable
- No capital expense or IT staff
- Ensured recovery
- Centralised management
- Easy regulatory compliance
- Broad platform and application support
- Expert help 24/7/365

#### **Backup and recovery service with managed infrastructure for heterogeneous environments**

Our backup and recovery service securely, reliably, and efficiently protects your organisation's critical data, directly over the Internet so you don't incur additional capital or IT expenses. Automatically back up desktop, laptop and server data from across your organisation and use a web browser to configure your desired backup policies and monitor your backups. Our cloud-based backup and recovery subscription service deduplicates, compresses, encrypts and then transmits the data to one of our top-tier data centres, managed by experts. You know that your data is protected by industry experts, according to the highest standards of security and reliability. And recovery is at your fingertips whenever you need it.

#### **How It Works**

We centralise the backup and recovery of data on all computers distributed throughout your organisation—headquarters as well as remote and branch office (ROBO) locations. Agents automatically back up your data over the Internet to a highly secure data centre. You monitor and manage everything within a web browser. Recovery is just as easy: when you need to restore data, simply navigate to the recovery point via an intuitive interface, then click. Our reports provide details about the status of your backups.

#### **Secure, reliable, certified data protection infrastructure**

- Our lights are always on, managing petabytes of data in multiple state-of-the-art data centres. This ensures your data is stored at the highest classification levels for data centre reliability and performance.
- Hot backups support 24/7 operations by backing up mission-critical applications while they are online.
- Independent ISO compliance audits, completed every year, guarantee our facilities and processes conform to the highest industry standards.
- AES encryption protects your data in transit and at rest in our cloud – only you have the key to unlock and access it.

#### **Easy deployment and management**

- Get real-time collaboration with colleagues or our customer service team via a social platform portal.
- Manage and monitor the health of your backup environment.
- Troubleshoot failed backups with greater speed and accuracy.

#### **Ensured compliance with data protection policies and regulations**

- Best-practice retentions (30 dailies and 11 monthlies) are standard.
- To retain data for longer than one year, our cloud-based long-term retention service lets you manage your data retention from the same user interface as your backups.
- EVault Reports provide instant, centralised, and accurate information about your entire backup and recovery process.

### Optimised performance with advanced compression and data deduplication

- Front-end data deduplication uses our proprietary delta block-level processing technology to ensure only new and changed data blocks within files are sent to storage, decreasing backup times.
- Compression technology and bandwidth throttling maximise backup transfer speed and minimise impact on productivity.

### World-class customer support

- Our data protection experts are available 24/7/365 at no additional cost to you.
- Our professional services teams can help you design, test and execute your data protection strategy.

### Extensible subscription services to meet your recovery time objectives

- Single-pass system and data recovery using bare metal capabilities
- Accelerated recoveries using onsite virtual or physical appliances
- Guaranteed recovery time options in case of site-wide or regional disaster
