

## USING FOAM IS COSTING YOU!

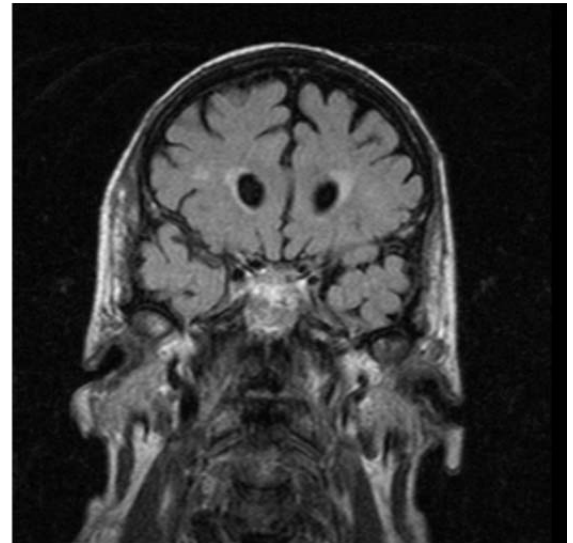

If you are using foam blocks and wedges to stabilize your patients during MR examinations, it is costing you in lost productivity. When foam fails to stabilize your patient, every repeated exam costs your department. Now there is a way to significantly reduce repeated exams due to patient motion by replacing your foams with Pearltec's MULTIPAD.

### HEAD TO HEAD COMPARISON

Patient (83 year old male)

EXAM WITH FOAM

EXAM WITH MULTIPAD

The average MRI system in the United States performs more than 3,000 exams per year with 150 exams non-diagnostic due to motion artifacts. By using Pearltec's MULTIPAD in place of foam, you will reduce the number of exam retakes due to motion and save the cost associated with lost productivity.
